

measurement: (cm)

L_s 5.3

L_2 5.2

L_1 4.8

F_c 1.0

H_R 0.6

H_H 8.3

(L_h 3.3)

为了解免 singularity.
机器人站立时,都要“曲膝盖”

Game homework 4.

- 平面走路: k-drive interface
V 之变化 考虑 步幅大小 (L_s) 及 周期 (T_s)
- 利用 gyroscope interface follow 人物.
- $V=0$: stand-walk-stand
stand 时 $\theta_1 = \theta_2 = \text{small}$.
(不要設成 0, 以免 singularity)

脚軌跡
Global $\left(2L_s \frac{t}{T_s}, \frac{F_c}{2} - \frac{F_c}{2} \cos\left(2\pi \frac{t}{T_s}\right) \right)$

Hip軌跡 $\left(\frac{L_s}{2} + t V_F, H_H - \frac{H_R}{2} \cos\left(2\pi \frac{t}{T_s}\right) \right)$

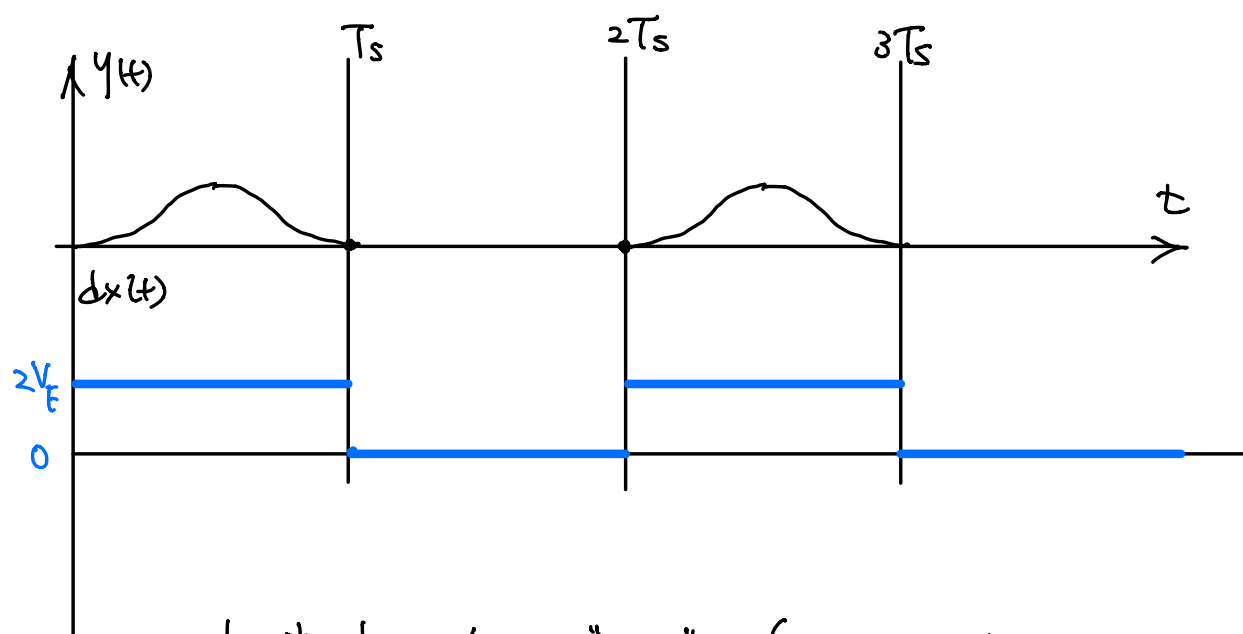

$$\frac{L_s}{2} \left(1 - \frac{t}{T_s}\right) + \frac{3}{2} L_s \left(\frac{t}{T_s}\right)$$

$$\left(= \frac{L_s}{2} + L_s \frac{t}{T_s} \right)$$

progression velocity

$$V_F = \frac{L_s}{T_s}$$

fast vs. slow
walk.

$$n = \left\lfloor \frac{t}{T_s} \right\rfloor \dots \text{第幾個 "block"} \quad (0, 1, 2, \dots)$$

$$n \text{ is even.} \quad tt = t \% T_s \quad y = y(tt)$$

odd

$$x += 2V_F \cdot tt$$

$$y = 0$$

x 不變.
